

Exploring ASP.NET 2.0 Using Visual C#® 2005

with Ken Getz, Andy Baron and Mary Chipman

This course provides a general overview of the exciting and powerful new features in ASP.NET 2.0. The course introduces many of the new ASP.NET server controls, shows how to incorporate the new membership, profile and personalization features, examines new data caching and data binding features, and more. This course will prepare upgrading ASP.NET developers to be productive with new features as soon as possible.
